

Cotton Handkerchiefs versus Tissues

Caracostea Hrisa Adelina

Why should we choose cotton handkerchiefs instead of tissues?

Tissues are fabricated from wood, thereby a lot of trees are cut and made into thin layers of paper. You might think that blowing your nose in a handkerchief is disgusting BUT you can wash that piece of fabric either in your washing machine or by using a little water and your hands. Cotton handkerchiefs are much more convenient because you can re-use them and save up some money. Tissues can only be used once before they get discarded into the trash can and thrown away into the environment.
